Unit :4 Staying Alive

4.4 Fossils worksheet

Name of the Student: _____ **Subject: Science**

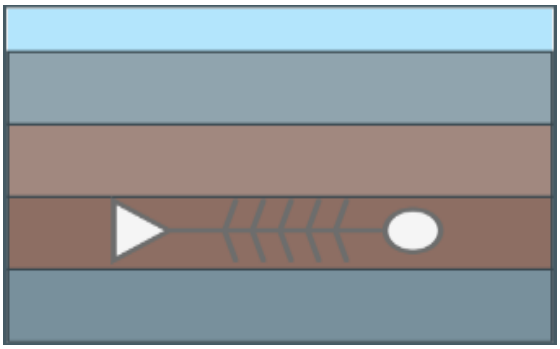

Grade 2: ____ **Date:** _____

Q1. Read each sentence. Write the letter of the picture that matches it.

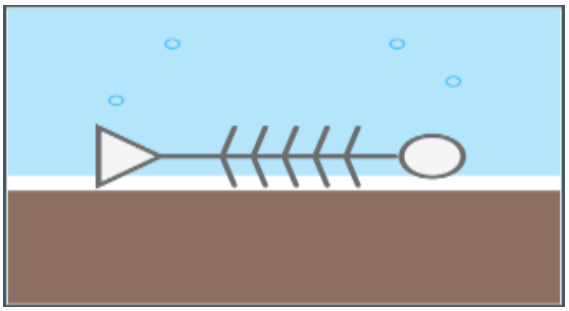

1	The animal dies and sinks into soft mud.	Picture:
2	The hard parts press into the mud. The shape is copied in the mud.	Picture:
3	Over a very long time, the mud turns to rock. The fossil is inside the rock.	Picture:
4	Scientists dig up the fossil very carefully.	Picture:

These four pictures show how a fossil forms. They are not in the right order.

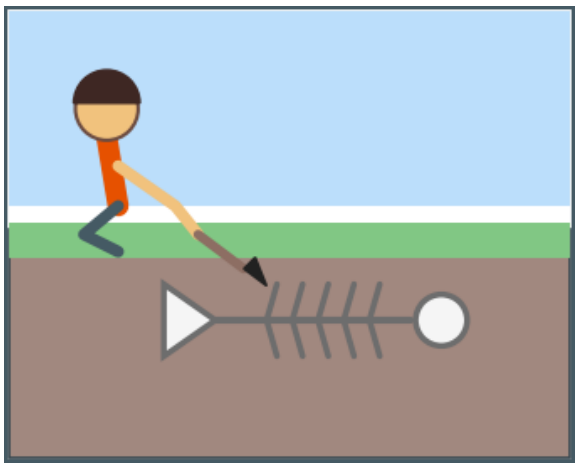

Picture A

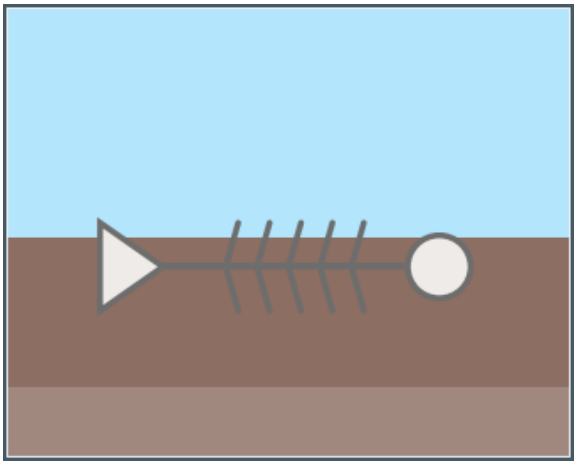

Picture B

Picture C

Picture D

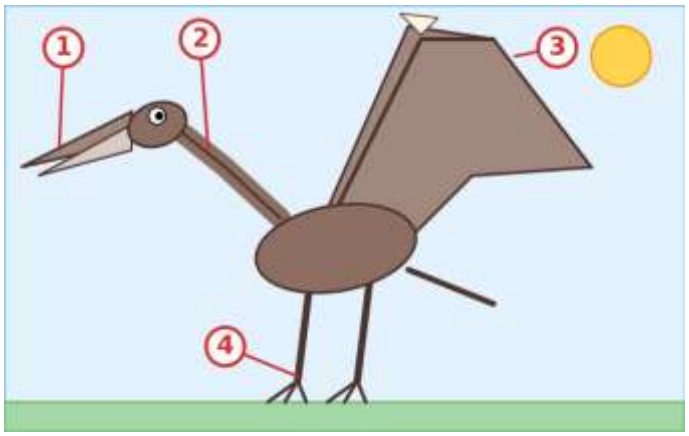

Q2.Use the words in the word bank to finish each sentence.

Word bank	fossil	impression	gum

1. A _____ is the shape or the remains of something that was once alive.
2. A shape pressed into mud or clay is called an _____ .
3. An insect can be trapped in sticky tree _____ .

Q3.(A Pterodactyl was a flying reptile. Scientists have found its fossils in rocks.)

1. **Look at the picture. Write the name of each body part next to its number.**

Word bank

beak neck wing feet

1. _____
2. _____
3. _____
4. _____

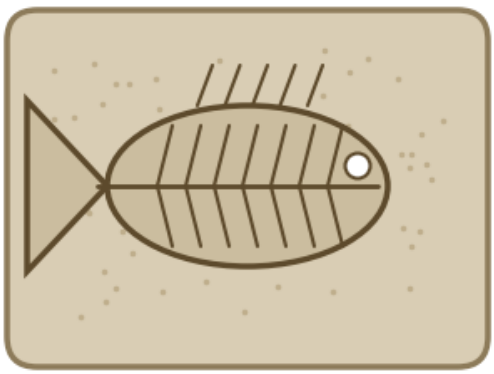

2. A Pterodactyl lived about _____ million years ago.
3. Is a Pterodactyl alive today? Circle your answer.yes or no

Q4.Look at the four fossil pictures.

Word bank	fish	leaf	dragonfly	eggs

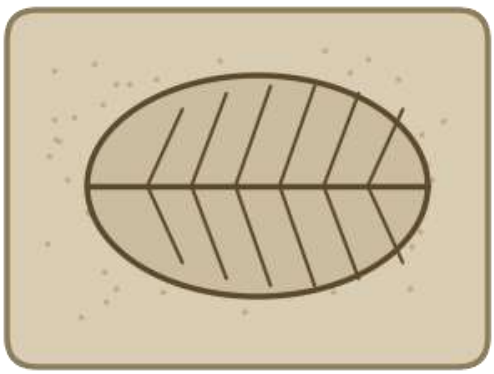

1. Write the name of each fossil on the line.

Fossil A

Name: _____

Fossil B

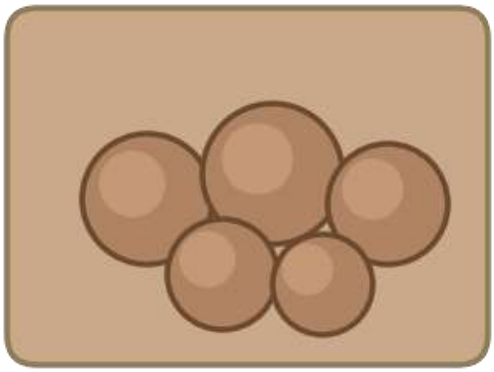

Name: _____

Fossil C

Fossil D

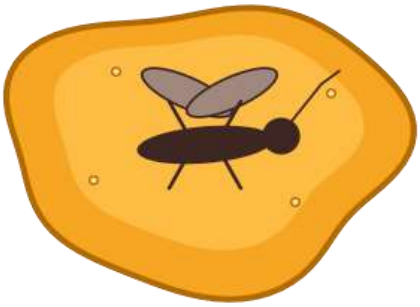

Name: _____

Name: _____

2. Which fossil was once a plant? Write its name.

_____

Q5.This insect was trapped many years ago. Now we can see it very clearly.

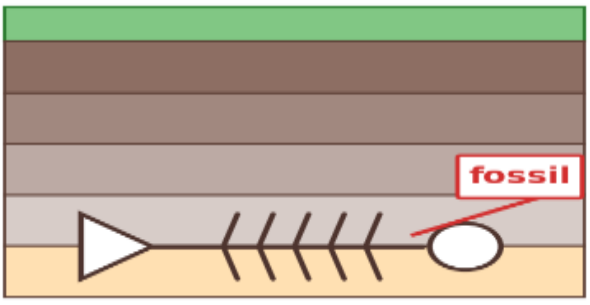

1. How was this insect trapped? Tick (✓) one answer.

a) in sticky tree gum b) in sea water c) in a cave

2. Write one body part of the insect that you can see._____

Q6.Most fossils are buried under rocks deep underground. Look at the picture.

1. Where are most fossils found? Tick (✓) one answer.

a) in rocks deep underground b) high up in a tree c) floating in the sea

2. True or false? Circle your answer.

Sometimes the sea or a river washes the rock away, so the fossil is easy to find.

True **False**

3. Why do scientists use small tools and paintbrushes to dig up a fossil? Tick (✓) one answer.

a) to paint the fossil
b) to clean away sand and soil without damaging the fossil
c) to make the fossil bigger
